## INFANT FEEDING IN SUMMER

The problem of substitute infant feeding becomes more complicated with the advent of the hot months. The milk supply of most communities is bad enough at all times, but in summer it presents grave dangers to the bottle-fed infant. Most peddled milk contains an enormously high bacterial content, and the use of preservatives is by no means uncommon. Even pasteurization of milk, once it is tainted, does not eliminate danger.

The rational solution lies in the use of

### HIGHLAND BRAND EVAPORATED CREAM

Simply the purest of cow's milk produced on model dairy farms—reaching the factory in the shortest time after leaving the cow, and handled with most scrupulous cleanliness—and sterilized and evaporated by a process which makes it easy of digestion and gives **absolute protection against all germs and other impurities.** It is the simplest, most uniform and satisfactory substitute food.
